Portable 5G Private Network Solution: Digital Resilience

Pegatron’s Digital Resilience, a portable 5G private network solution, contains 5G-SA O RAN based gNodeB plus 5G core system, which is a highly reliable mobile private network system. The backhaul external network can be connected to leased lines which are provided by ISPs or use orbital satellites for internet connection. It’s quick and easy to setup a 5G private network to provide on demand broadband network anywhere, based on your use case for Digital Resilience applications. Digital Resilience applications can cover digital transformation for smart factories, public transportation, public safety, mission critical IT systems, corporate data security, etc.
