The Intel(R) MPI Library for Linux* OS is a multi-fabric message passing library based on ANL* MPICH3* and OSU* MVAPICH2*.

The Intel(R) MPI Library for Linux* OS implements the Message Passing Interface, version 3.1 (MPI-3) specification.

To receive technical support and updates, you need to register your Intel(R) Software Development Product. See the Technical Support section.

Product Contents
-----------------
The Intel(R) MPI Library Runtime Environment (RTO) contains the tools you need to run programs including scalable process management system (Hydra) and supporting utilities, shared (.so) libraries, and documentation.

The Intel(R) MPI Library Development Kit (SDK) includes all of the Runtime Environment components and compilation tools: compiler commands (mpicc, mpiicc, etc.), include files and modules, static (.a) libraries, debug libraries, and test codes.

Related Products and Services
----------------------------
See http://intel.ly/1OzXhpI for a current list of deprecated features.

Intel(R) MPI Library 2017:
- Support for the MPI-3.1 standard.
- New topology-aware collective communication algorithms (I_MPI_ADJUST family).
- Effective MCDRAM (NUMA memory) support. See the "Memory Placement Policy Control" topic in the Developer Reference for more information.
- Controls for asynchronous progress thread pinning (I_MPI_ASYNC_PROGRESS).
- Direct receive functionality for the OFI* fabric (I_MPI_OFI_DRECV).
- PMI-2 protocol support (I_MPI_PMID).
- New process startup method (I_MPI_HYDRA_PREFORK).
- Startup improvements for the SLURM* job manager (I_MPI_SLURM_EXT).
- New algorithm for MPI-IO collective read operation on the Lustre* file system (I_MPI_LUSTREStripe_AWARE).
- Debian Almquist (dash) shell support in compiler scripts and mpitune.
- Performance tuning for processors based on Intel(R) microarchitecture codenamed Broadwell and for Intel(R) Omni-Path Architecture (Intel(R) OPA).
- Performance tuning for Intel(R) Xeon Phi(TM) Processor and Coprocessor (code name Knights Landing) and Intel(R) OPA.
- OFI latency and message rate improvements.
- OFI is now the default fabric for Intel(R) OPA and Intel(R) True Scale Fabric.
- MPD process manager is removed.
- Dedicated pvfs2 ADIO driver is disabled.
- SSHM support is removed.
- Support for the Intel(R) microarchitectures older than the generation codenamed Sandy Bridge is deprecated.
- Documentation improvements.
- The MPI Tuner Tutorial is removed from the installation and is available online at https://software.intel.com/en-us/intel-software-technical-documentation

Intel(R) MPI Library 5.1 Update 3:
- Deprecation list updated. New deprecations:
  - SSHM
  - MPD
  - Epoll
  - JMI
  - PVFS2
- Fixed shared memory problem on Intel(R) Xeon Phi (codename: Knights Landing).
- New algorithms and selection mechanism for nonblocking collectives.
- New psm2 option for Intel(R) Omni-Path.
- Added I_MPI_BCAST_ADJUST_SEGMENT variable to control MPI_Bcast.
- Fixed long count support for some collective messages.
- Binding kit reworked with support for Intel(R) Many Integrated Core Architecture and support for ILP64 on third party compilers.

Intel(R) MPI Library 5.1 Update 2:
- Intel(R) MPI Library supports YARN* cluster manager. Llama* should be installed on the cluster.
- DAPL library UCM settings are automatically adjusted for MPI jobs of more than 1024 ranks, resulting in more stable job start-up.
- ILP64 support enhancements, support for MPI modules in Fortran 90.
- Added the direct receive functionality for the TMI fabric.
- Single copy intra-node communication using Linux supported
cross memory attach (CMA) is now default.

Intel(R) MPI Library 5.1 Update 1:
- Change the named-user licensing scheme. See more details in the Installation Instructions section of Intel(R) MPI Library Installation Guide.
- Bug fixes

Intel(R) MPI Library 5.1:
- Supported OpenFabrics Interface* (OFI*) v1.0 API
- Supported Fortran 2008
- Updated the default value for _MPI_FABRICS_LIST. See the Intel(R) MPI Library Developer Reference for details
- Added the Troubleshooting chapter to the Intel(R) MPI Library Developer Guide.
- Added new application specific features in the Automatic Tuner and Hydra process manager. See the MPI Tuner Tutorial for details.
- Added the MPI_Pcontrol feature for internal statistics.
- Increased the possible space for MPI_TAG.
- Changed the default product installation directories. See the README document for details.
- Bug fixes

Note:
Intel(R) MPI Benchmarks is delivered as part of Intel(R) MPI Library. For the new features of Intel MPI Benchmarks, see the What's New section in Intel(R) MPI Benchmarks README.

Intel(R) MPI Library 5.0 Update 3:
- Support for IBM* General Parallel File System* (GPFS*) through the new environment variable _MPI_EXTRA_FILESYSTEM
- Support for the new bootstrap server, pbsdsh
- Support for the rename mechanism for the file, stats.txt, to avoid overwriting
- Native statistics collection can be controlled with MPI_Pcontrol
- Bug fixes

Intel(R) MPI Library 5.0 Update 2:
- Single copy intra-node communication using Linux supported cross memory attach (CMA)
- Multi-threaded optimized library is used by default for linking with single and multi-threaded MPI applications
- Added gtool option for running external tools
- Tuning for TMI fabrics on processors using the Haswell microarchitecture
- Enhancements to statistics gathering mode
- Bug fixes

Intel(R) MPI Library 5.0 Update 1:
- Changed settings for non-default installation path. If you choose to install Intel(R) MPI Library to a non-default path, impi/<version>.<package> will be appended to the selected installation path. Use symbolic links to this path if you need a specific pathname.
- Directory structure update. New links have been added to always point to the most recently installed version of the Intel(R) MPI Library.
- Bug fixes, including:
  o Avoid conflict with TMI ADI messages, resolving hangs for LS-Dyna*
- Collective performance improvements
- Documentation update
- Man pages copyright updated
- Added support for -fopenmp in mpiicc, mpiicpc, and mpiifort
- Improved pinning under job schedulers

Intel(R) MPI Library 5.0:
- Improved application binary interface (ABI) compatibility between different MPI implementations
- Improved performance of the OFA fabric on Intel(R) Xeon(TM) E5 V2 and Intel(R) Xeon(TM) E7 V2 family processors
- Add the option I_MPI_JOB_RESPECT_PROCESS_PLACEMENT to honour process placement from job schedulers
- Remove all IA-32 architecture support
- Add the debug information into optimized single/multi-threaded libraries
- Implement the MPI-3 standard including but not limited to:
  o Non-blocking collective operations
  o Fast one-sided operations
  o Large counts for messages greater than 2GB
- Support for Parallel Distributed Shell*
- Allow permuted entries in machine file when running a single instance of pmi-proxy
- Support for mixed operating systems in the Hydra process manager (Linux* OS and Windows* OS)
- Make the following changes to the documentation:
  o Change the Intel(R) MPI Library Getting Started Guide to Intel(R) MPI Library Developer Guide
  o Add the Intel(R) MPI Library Getting Started page
  o Add the tutorial: MPI Tuner for Intel(R) MPI Library
- Bug fixes
- Deprecate MPD process managers

-------------------------------
32 Bit Support of Intel(R) MPI Library & Intel(R) Trace Analyzer and Collector
Inclusion of 32-bit binaries in the Intel(R) MPI Library and Intel(R) Trace Analyzer and Collector products is being deprecated. If 32-bit support is required, we advise that you remain on Intel(R) MPI Library version 4.1 Updates and Intel(R) Trace Analyzer and Collector version 8.1 Updates, which continue to include 32-bit binaries. The Intel(R) MPI Library 5.0 and Intel(R) Trace Analyzer and Collector 9.0 releases will not include 32-bit binaries. Many developers have already migrated to 64-bit implementations of both their applications and of Intel libraries and tools. If you have concerns about this deprecation, please send us feedback by submitting an issue at the Intel(R) Premier Customer Support site (http://premier.intel.com) as soon as possible with your contact information.
-------------------------------

Key Features

This release of the Intel(R) MPI Library supports the following major features:
- MPI-1, MPI-2.2 and MPI-3.1 specification conformance
- Support for Intel(R) Xeon Phi(TM) processors (formerly code named
- Support for any combination of the following interconnection fabrics:
  o Shared memory
  o Network fabrics supporting Intel(R) Omni-Path Architecture (Intel(R) OPA) devices, through either Tag Matching Interface (TMI) or OpenFabrics Interface* (OFI*).
  o Network fabrics with tag matching capabilities through Tag Matching Interface (TMI), such as Intel(R) True Scale Fabric, Infiniband*, Myrinet* and other interconnects
  o Native InfiniBand* interface through OFED* verbs provided by Open Fabrics Alliance* (OFA*)
  o OpenFabrics Interface* (OFI*)
  o RDMA-capable network fabrics through DAPL*, such as Infiniband* and Myrinet*
  o Sockets, for example, TCP/IP over Ethernet*, Gigabit Ethernet*, and other interconnects

- Support for the following MPI communication modes related to Intel(R) Xeon Phi(TM) coprocessor:
  o Communication inside the Intel(R) Xeon Phi(TM) coprocessor
  o Communication between the Intel(R) Xeon Phi(TM) coprocessor and the host CPU inside one node
  o Communication between the Intel(R) Xeon Phi(TM) coprocessors inside one node
  o Communication between the Intel(R) Xeon Phi(TM) coprocessors and host CPU between several nodes

- (SDK only) Support for Intel(R) 64 architecture and Intel(R) MIC Architecture clusters using:
  o Intel(R) C++ Compiler for Linux* OS version 14.0 through 16.0
  o Intel(R) Fortran Compiler for Linux* OS version 14.0 through 16.0
  o GNU* C, C++ and Fortran 95 compilers

- (SDK only) C, C++, Fortran 77, Fortran 90, and Fortran 2008 language bindings
- (SDK only) Dynamic or static linking

-------------------

System Requirements
-------------------

The following sections describe supported hardware and software.

Supported Hardware
-------------------

Systems based on the Intel(R) 64 architecture, in particular:
  Intel(R) Core(TM) processor family or higher
  Intel(R) Xeon(R) E5 v3 processor families recommended
  Intel(R) Xeon(R) E7 v2 processor families recommended
  1 GB of RAM per core
  2 GB of RAM per core recommended
  1 GB of free hard disk space

Intel(R) Xeon Phi(TM) Coprocessor (formerly code named Knights Corner) based on Intel(R) MIC Architecture

Supported Software
Operating Systems: (issues including installation ones are possible for Operating Systems that are not released at the date of Intel(R) MPI Library 5.0 release)

Systems based on the Intel(R) 64 architecture:
- Red Hat* Enterprise Linux* 6, 7
- Fedora* 23, 24
- CentOS* 6, 7
- SUSE* Linux Enterprise Server* 11, 12,
- Ubuntu* LTS 14.04, 16.04
- Debian* 7, 8

(SDK only) Compilers:
- GNU*: C, C++, Fortran 77 3.3 or higher, Fortran 95 4.4.0 or higher
- Intel(R) C++ Compiler for Linux* OS 15.0 through 17.0 or higher
- Intel(R) Fortran Compiler for Linux* OS 15.0 through 17.0 or higher

(SDK only) Supported Debuggers:
- Rogue Wave* Software TotalView* 6.8 or higher
- Allinea* DDT* v1.9.2 or higher
- GNU* Debuggers

Batch Systems:
- Platform* LSF* 6.1 or higher
- Altair* PBS Pro* 7.1 or higher
- Torque* 1.2.0 or higher
- Parallelnavi* NQS* for Linux* OS V2.0L10 or higher
- Parallelnavi* for Linux* OS Advanced Edition V1.0L10A or higher
- NetBatch* v6.x or higher
- SLURM* 1.2.21 or higher
- Univa* Grid Engine* 6.1 or higher
- IBM* LoadLeveler* 4.1.1.5 or higher
- Platform* Lava* 1.0

Recommended InfiniBand Software:
- OpenFabrics* Enterprise Distribution (OFED*) 1.5.4.1 or higher.
- Intel(R) True Scale Fabric Host Channel Adapter Host Drivers & Software (OFED+) v7.2.0 or higher.
- Mellanox* OFED* 1.5.3-4.0.42 or higher.

Additional Software:
- Python* 2.2 or higher, including the python-xml module. Python* distributions are available for download from your OS vendor or at http://www.python.org (for Python* source distributions).
- An XML parser such as expat* or pyxml*.
- If using InfiniBand*, Myrinet*, or other RDMA-capable network fabrics, a DAPL* 1.2 standard-compliant provider library/driver is required.
DAPL* providers are typically provided with your network fabric hardware and software.

- DAPL auto provider selection mechanism requires dapl-2.0.37 or higher for Intel(R) Xeon(R) and Intel(R) Manycore Platform Software Stack (Intel(R) MPSS) gold update 3 or higher for Intel (R) Xeon Phi(TM).
- Improved NUMA support requires dapl-2.0.37 or higher
- Intel(R) Many Integrated Core Platform Software Stack (MPSS) 2.1 Beta or higher for the respective host operating system. MPSS may support specific operating system/kernel only. For most recent specific operating system requirements, see http://software.intel.com/en-us/articles/intel-mpi-library-for-linux-kb/all/ or http://software.intel.com/mic-developer .

Note that the Intel(R) MPI Library is tuned for optimum performance on the latest MPSS versions as of release time.

- If you use the memory policy control function to attach processes memory to specified NUMA* nodes memory, install the libnuma.so* library and numacl* utility 2.0.9 or higher. The following packages are required:
  - numacl
  - numacl-devel
  - numacl-libs

(SDK only) Supported Languages
----------------------------------

For GNU* compilers: C, C++, Fortran 77, Fortran 95
For Intel compilers: C, C++, Fortran 77, Fortran 90, Fortran 95, Fortran 2008

-----------------
Installation Notes
-----------------

See the Intel(R) MPI Library for Linux* OS Installation Guide for details.

-------------
Documentation
-------------

Intel(R) MPI Library for Linux* OS Getting Started page, found in get_started.htm, contains information on the following subject:

- Compiling and running your MPI program

Intel(R) MPI Library for Linux* OS Developer Guide, found in Developer_Guide.htm (HTML Uncompressed Help) and Developer_Guide.pdf, contains information on the following subjects:

- First steps using the Intel(R) MPI Library
- First-aid troubleshooting actions

Intel(R) MPI Library for Linux* OS Developer Reference, found in Developer_Reference.htm (HTML Uncompressed Help) and Developer_Reference.pdf, contains information on the following subjects:
- Command Reference describes commands, options, and environment variables
- Tuning Reference describes environment variables that influence library behavior and performance

Intel(R) MPI Library for Linux* OS Installation Guide, found in INSTALL.html, contains information on the following subjects:
- Obtaining, installing, and uninstalling the Intel(R) MPI Library
- Getting technical support

Tutorial: MPI Tuner for Intel(R) MPI Library, found in https://software.intel.com/en-us/intel-software-technical-documentation, contains information on the following subjects:
- How to use the MPI Tuner for Intel(R) MPI Library to get optimized configuration files for the runtime library automatically
- How to troubleshoot the common issues with the MPI tuner

-----------------------------
Known Issues and Limitations
-----------------------------

Note: The following list includes the information until Intel(R) MPI Library 2017 is released. For the most up-to-date list of known issues, as well as latest tips and tricks on using the library, visit the Intel(R) MPI Library for Linux* Knowledge Base at http://software.intel.com/en-us/articles/intel-mpi-library-for-linux-kb/all/

- Intel MPI Library 2017 may hang when broadcasting large (>16k) derived datatypes. To workaround this issue, set $I_MPI_ADJUST_BCAST="1:16384-0$".

- ILP64 is not supported by MPI modules for Fortran* 2008.

- The $I_MPI_HYDRA_PREFORK$ variable is not supported on Intel(R) Xeon Phi(TM) coprocessors codenamed Knights Corner.

- Intel MPI Library 2017 does not work without libnuma. You will encounter a segmentation fault if libnuma is unavailable.

- In case of program termination (like signal), remove the trash in the /dev/shm/ directory manually with: rm -r /dev/shm/shm-col-space-*

- In case of large number (per node) of simultaneously used communicators (more than 10,000), it is recommended to increase maximum numbers of memory mappings with one of the following methods:
  o echo 1048576 > /proc/sys/vm/max_map_count
  o sysctl -w vm.max_map_count=1048576
  o switch off shared memory collectives with next variable:
    $I_MPI_COLL_INTRANODE=pt2pt$.

- Intel(R) MPI Library does not support the new processes startup method ($I_MPI_HYDRA_PREFORK=1$) on Intel(R) Xeon Phi(TM) processors (formerly code named Knights Corner).
- On some Linux* distributions, the Intel(R) MPI Library will fail for non-root users due to security limitations. This has been seen on Ubuntu* 12.04, and could impact other distributions and versions as well. Two workarounds have been identified for this issue.
  o Enable ptrace for non-root users with:
    echo 0 | sudo tee /proc/sys/kernel/yama/ptrace_scope
  o Or, revert the Intel(R) MPI Library to an earlier shared memory mechanism which is not impacted by setting:
    I_MPI_SHM_LMT=shm

- Ubuntu* does not allow attaching a debugger to a non-child process. In order to use -gdb, this must be disabled by setting the sysctl value /proc/sys/kernel/yama/ptrace_scope to 0.

- Cross-OS runs using ssh from a Windows* host fail. Two known workarounds exist:
  o Create a symlink on the Linux* host that looks identical to the Windows* path to pmi_proxy.
  o Start hydra_persist on the Linux* host in the background (hydra_persist &) and use -bootstrap service from the Windows* host. This requires that the Hydra service also be installed and started on the Windows* host.

- The OFA fabric and certain DAPL providers may not work or provide worthwhile performance with the Intel(R) MPI Library for Linux* OS, for example:
  o Intel(R) True Scale Fabric and Intel(R) Omni-Path Fabric.
    Use the OFI/TMI libraries included with the Intel(R) MPI Library when running over the Intel(R) True Scale Fabric PSM* interconnect interface for best performance.

- Switching on statistics gathering could result in increased time in MPI_Finalize.

- In systems where some nodes have only Intel(R) True Scale Fabric or Intel(R) Omni-Path Fabric available, while others have both Intel(R) True Scale and e.g. Mellanox* HCAs, automatic fabric detection will lead to a hang or failure, as the first type of nodes will select ofi/tmi, and the second type will select dapl as the internode fabric. To avoid this, explicitly specify a fabric that is available on all nodes as the internode fabric.

- Intel(R) MPI Library 5.x for Linux* OS is binary compatible with the majority of Intel MPI Library 4.1.x-based applications. Recompile your application only if you use:
  o MPI_Dist_graph_create, MPI_Dist_graph_create_adjacent,
    MPI_Dist_graph_neighbors, MPI_Dist_graph_neighbors_count, 
    (C, C++, Fortran) 
  MPI::Get_address (C++ only)

- Hydra hangs when used under versions 7.2 or 7.3 of the GNU* Debugger gdb.
- In order to run a mixed operating system job (Linux* and Windows*), all binaries must link to the same single or multithreaded MPI library. The single and multithreaded libraries are incompatible with each other and should not be mixed. Note that the pre-compiled binaries for the Intel® MPI Benchmarks are inconsistent (Linux* version links to multithreaded, Windows* version links to single threaded) and as such, at least one must be rebuilt to match the other.

- Intel(R) MPI Library does not support using the OFA fabric over an Intel(R) Symmetric Communications Interface (Intel(R) SCI) adapter. If you are using an Intel SCI adapter, such as with Intel(R) Many Integrated Core Architecture, you will need to select a different fabric.

- The TMI and OFI fabrics over PSM do not support messages larger than $2^{32} - 1$ bytes. If you have messages larger than this limit, select a different fabric.

- Intel(R) Software Manager will always install to either /opt or $HOME on Linux* OS even if a custom installation path is chosen. This can slow installation when the destination folder is a slow NFS shared folder, even if locally hosted.

- If communication between two existing MPI applications is established using the process attachment mechanism, the library does not control whether the same fabric has been selected for each application. This situation may cause unexpected applications behavior. Set the I_MPI_FABRICS variable to the same values for each application to avoid this issue.

- Do not load thread-safe Intel(R) MPI libraries through dlopen(3).

- Certain DAPL* providers may not function properly if your application uses system(3), fork(2), vfork(2), or clone(2) system calls. Do not use these system calls or functions based upon them. For example, system(3), with:
  o OFED* DAPL* provider with Linux* kernel version earlier than official version 2.6.16. Set the RDMAV_FORK_SAFE environment variable to enable the OFED workaround with compatible kernel version.

- MPI_Mprobe, MPI_Improbe, and MPI_Cancel are not supported by the TMI and OFI fabrics.

- You may get an error message at the end of a Checkpoint-Restart enabled application, if some of the application processes exit in the middle of taking a checkpoint image. Such error does not impact the application, thus you can ignore it. To avoid this error, set a larger number than your previous configured value for the <sec> argument of the -checkpoint-interval option. The following error message details are for your reference:
  [proxy:0:0@hostname] HYDT_ckpoint_blcr_checkpoint (/tools/ckpoint/blcr/ckpoint_blcr.c:313): cr_poll_checkpoint failed: No such process
  [proxy:0:0@hostname] ckpoint_thread (/tools/ckpoint/ckpoint.c:559): blcr checkpoint returned error
  [proxy:0:0@hostname] HYDT_ckpoint_finalize (/tools/ckpoint/ckpoint.c:878)
: Error in checkpoint thread 0x7

- The Intel(R) MPI Library requires the presence of the /dev/shm device in the system. To avoid failures related to the inability to create a shared memory segment, make sure the /dev/shm device is set up correctly.

- The Intel(R) MPI Library uses TCP sockets to pass stdin stream to the application. If you redirect a large file, the transfer can take long and cause the communication to hang on the remote side. To avoid this issue, pass large files to the application as command line options.

- DAPL auto provider selection mechanism and improved NUMA support require dapl-2.0.37 or newer.

- If you set I_MPI_SHM_LMT=direct, the setting has no effect if the Linux* kernel version is lower than 3.2.

-----------------
Technical Support
-----------------

Your feedback is very important to us. To receive technical support for the tools provided in this product and technical information including FAQ's and product updates, you need to register for an Intel(R) Premier Support account at the Registration Center.

This package is supported by Intel(R) Premier Support. Direct customer support requests at:
https://premier.intel.com

General information on Intel(R) Software Development Products support offerings may be obtained at:
http://www.intel.com/software/products/support

The Intel(R) MPI Library home page can be found at:
http://www.intel.com/go/mpi

The Intel(R) MPI Library support web site, http://software.intel.com/en-us/articles/intel-mpi-library-for-linux-kb/all/ provides the latest top technical issues, frequently asked questions, product documentation, and product errata.

Requests for licenses can be directed to the Registration Center at:
http://www.intel.com/software/products/registrationcenter

Before submitting a support issue, see the Intel(R) MPI Library for Linux* OS Developer Guide for details on post-install testing to ensure that basic facilities are working.

When submitting a support issue to Intel(R) Premier Support, please provide specific details of your problem, including:
- The Intel(R) MPI Library package name and version information
- Host architecture (for example, Intel(R) 64 architecture)
- Compiler(s) and versions
- Operating system(s) and versions
- Specifics on how to reproduce the problem. Include makefiles, command lines, small test cases, and build instructions. Use <installdir>/test sources as test cases, when possible.

You can obtain version information for the Intel(R) MPI Library package in the file mpisupport.txt.

Submitting Issues
-----------------  
- Go to https://premier.intel.com
- Log in to the site. Note that your username and password are case-sensitive.
- Click on the "Submit Issue" button in the top right.
- Search for and select "Intel(R) MPI Library, Linux*" from the product list, then click "Next".
- Complete the fields describing your issue and attach any supporting files.
- Review the issue and complete submission.

Note: Notify your support representative prior to submitting source code where access needs to be restricted to certain countries to determine if this request can be accommodated.

psf license agreement for python 2.3

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using Python 2.3 software in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, PSF hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 2.3 alone or in any derivative version, provided, however, that PSF's License Agreement and PSF's notice of copyright, for example, "Copyright (c) 2001, 2002, 2003, 2004 Python Software Foundation; All Rights Reserved" are retained in Python 2.3 alone or in any derivative version prepared by Licensee.
3. In the event Licensee prepares a derivative work that is based on or incorporates Python 2.3 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 2.3.
4. PSF is making Python 2.3 available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 2.3 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 2.3 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 2.3, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.
8. By copying, installing or otherwise using Python 2.3, Licensee agrees to be bound by the terms and conditions of this License Agreement.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).
"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Optimization Notice
-------------------
Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2, SSE3, and SSSE3 instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice.
