### Accelerating IP telecom profitability

**RADVISION** leverages Intel® Parallel Studio to dramatically accelerate the performance of IP-based applications on multicore platforms.

**Company**

Begun in 1992, **RADVISION** is the industry's leading provider of products and technologies for unified visual communications over IP and 3G networks. **RADVISION** offers the broadest and most complete set of standards-based video networking infrastructure and developer toolkits on the market today. These products enable customers and partners to deploy unified communication networks and services, and develop video network equipment and device solutions faster and more reliably than ever before. **RADVISION** is driving the unified communications evolution by combining the power of video, voice, data and wireless in-room videoconferencing systems, mobile video solutions, and highly scalable video-enabled desktop platforms for IP and emerging next-generation networks.

**Mission**

**RADVISION** is committed to providing products and services that reduce time and costs for Telecom Equipment Manufacturers (TEMs) and Systems Integrators (SI) developing, deploying, and marketing multimedia communications solutions.

**Product**

The award-winning SIP Toolkit (Session Initiation Protocol) is a powerful and highly versatile set of tools that dramatically accelerates development time of SIP applications. The SIP protocol stack provides all necessary SIP, RTP, and SDP functionality, such as encoding, sending, parsing, and receiving SIP messages over UDP, TCP, TLS, SCTP, and IPSec, as well as managing SIP calls and transactions and ensuring reliability.

**Challenge**

Scale up performance along with the number of cores/processors.

**Results**

**RADVISION** experienced a dramatic improvement in core utilization.

**Impact**

Server calls per second increased significantly for **RADVISION**.

---

*“We are pleased to see that by using Intel's state-of-the-art multithreading optimization tools, we have managed to boost our products’ performance significantly in a very short time.”*

RADVISION
Challenge: why RADVISION’s products benefit from utilizing parallelism

The SIP Toolkit provides developers the ability to implement any type of application, including clients, servers, and testing tools, etc. Server applications are usually required to run on powerful platforms in very high-load situations and to concurrently serve thousands of sessions per second. With the growing popularity of multicore platforms, RADVISION needed to optimize its SIP Toolkit to run on platforms containing multiple cores that can carry a high load. It became extremely necessary to optimize the SIP Toolkit’s performance, especially in multithreaded environments, to accommodate the growing demand for platforms with high processing power based on multicore technology. Performance improvement through parallelism utilization can help customers handle more sessions concurrently, thereby increasing revenue.

Results

RADVISION found a gap beyond the causes of IPCs and synchronizations, prompting an inspection of the code to see where it spends time and why. The company realized that it could decrease the time the code waits for synchronization objects without jeopardizing the objects’ coherency or its critical sections. Several key sections were identified. Once the code was modified, another session of tests using the Intel tools was conducted to check the effects. This process continued until all major issues were resolved. Code performance dramatically increased over the original figures.

How Intel Parallel Studio Assisted

RADVISION used Intel Parallel Studio along with Intel® VTune™ Performance Analyzer with Intel® Thread Profiler for Windows® and Intel® Thread Checker to get a clear view of which process was waiting and why. It also acquired detailed information regarding the time the code spent in various sections, down to the exact location that needed to be investigated. Integration with the Microsoft Visual Studio IDE® also had a positive impact on the code analysis.
Optimization Notice

Intel® compilers, associated libraries and associated development tools may include or utilize options that optimize for instruction sets that are available in both Intel® and non-Intel microprocessors (for example SIMD instruction sets), but do not optimize equally for non-Intel microprocessors. In addition, certain compiler options for Intel compilers, including some that are not specific to Intel micro-architecture, are reserved for Intel microprocessors. For a detailed description of Intel compiler options, including the instruction sets and specific microprocessors they implicate, please refer to the “Intel® Compiler User and Reference Guides” under “Compiler Options.” Many library routines that are part of Intel® compiler products are more highly optimized for Intel microprocessors than for other microprocessors. While the compilers and libraries in Intel® compiler products offer optimizations for both Intel and Intel-compatible microprocessors, depending on the options you select, your code and other factors, you likely will get extra performance on Intel microprocessors.

Intel® compilers, associated libraries and associated development tools may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include Intel® Streaming SIMD Extensions 2 (Intel® SSE2), Intel® Streaming SIMD Extensions 3 (Intel® SSE3), and Supplemental Streaming SIMD Extensions 3 (Intel® SSSE3) instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors.

While Intel believes our compilers and libraries are excellent choices to assist in obtaining the best performance on Intel® and non-Intel microprocessors, Intel recommends that you evaluate other compilers and libraries to determine which best meet your requirements. We hope to win your business by striving to offer the best performance of any compiler or library; please let us know if you find we do not.
